

Task

perform all constraints in a single table

```
use 10kcoders;
create table vote(
name varchar(100),
phone bigint unique,
age int check(age >18),
const varchar(100) default('India'));
select *from vote;
insert into vote values ("Anil",123456789,25,"India");
select *from vote;
insert into vote values ("Ammu",213456789,15);
INSERT INTO vote (name, phone, age) VALUES ("balu", 987654321, 19);
insert into vote values ("gani",245656789,35,"AP");
```

The screenshot shows a MySQL Workbench interface with a result grid. The grid has four columns: name, phone, age, and const. The data is as follows:

	name	phone	age	const
▶	Anil	123456789	25	India
	balu	987654321	19	India
	gani	245656789	35	AP
